

GABRIEL DANTAS

Design Engineer · Product UI, Design Systems & Real-Time 3D

João Pessoa, Brazil (UTC-3 — full overlap with US hours) | gabrieldantas1404@icloud.com | +55 83 99130-6309
linkedin.com/in/gabrieldborges | github.com/gabrieldborges

Design engineer who ships product interfaces end to end — design systems, responsive shells, data visualization, and the tests that keep them honest. I came to software from live drone-show engineering, directing 3D animation synchronized across fleets of up to 1,600 aircraft for audiences of 100,000. Founder of GS3 Motion, a software studio with products in production for paying customers.

EXPERIENCE

GS3 Motion — Founder & Design Engineer Nov 2024 – Present · Remote
Software studio building production systems for healthcare and construction clients.

- FaturaMed** — medical revenue-recovery platform for doctors (in production, paying customers)
- Own the entire web frontend: built the design system from brand identity to shipped UI — design tokens, typography, light and dark themes, and the shared component layer every screen uses.
 - Designed and built the responsive application shell — collapsible sidebar (icon rail on desktop, drawer on mobile), unified with the topbar by a single height token.
 - Built the data-visualization layer (donut, funnel) on @nivo, legible down to phone widths; added TanStack Query caching and a persistent shell, replacing per-screen refetches with skeleton-driven loading states.
 - Established the project's frontend testing environment (Vitest + Testing Library), including a test asserting password reset never reveals whether an account exists.

- Copesolo** — production tracking and payroll-bonus system for the largest foundation and geotechnical engineering firm in Northeast Brazil (~100 employees)
- Sole engineer, full stack: FastAPI + async SQLAlchemy + Alembic on Supabase Postgres; React + TypeScript + Tailwind frontend.
 - Built a two-regime bonus engine (hourly and per-meter) with row-level locking at payroll close, so concurrent requests cannot pay the same work twice.
 - Wrote the architecture decision records the project runs on, pinned every runtime (Node, Python, Postgres), and generated API contracts from the backend so client and server cannot drift apart silently.
 - 66 backend tests (pytest), 46 frontend unit tests, 13 Playwright end-to-end suites; ARIA, keyboard navigation and screen-reader affordances throughout.

- Alok** — Drone Show Engineer 2024 – 2026
- Directed and engineered live drone shows: 3D animation choreographed and synchronized across fleets of up to 1,600 aircraft, performed for live audiences of 100,000.
 - Translated creative concepts into deterministic flight data — procedural design, timing, spatial constraints and physical execution in a system where a bug is visible to a stadium.

- Pixel Drone** — Drone Show Engineer 2024 – 2026
- Built and validated show choreography for commercial drone productions, from 3D animation through flight-ready output.

- Damoda** — 3D Technical Artist Shenzhen, China · 2024
- Three-month engagement with a Chinese drone-show manufacturer, working across the animation-to-hardware pipeline.

TECHNICAL SKILLS

Design Engineering	Design systems, design tokens, theming (light/dark), responsive layout, data visualization, accessibility (ARIA, keyboard, screen readers)
Frontend	TypeScript, React, Next.js (App Router), Tailwind CSS, TanStack Query, React Hook Form + Zod, Radix UI, Vite
Backend	NestJS, FastAPI, SQLAlchemy, Prisma, PostgreSQL, Redis/BullMQ, S3, REST
Testing & Quality	Vitest, Testing Library, Playwright, pytest, architecture decision records, pinned runtimes
AI-Assisted Eng.	Anthropic Claude SDK (vision OCR, structured extraction), AI-driven development workflows
3D & Real-Time	Unreal Engine, Blender, Maya, procedural animation, drone-show choreography

EDUCATION

- FIAP** — B.Sc. Software Engineering 2024 – 2028 (expected)
- Animation Mentor** — Character Animation specialization, USA 2024
- Faculdade Méliès** — 3D Animation & Design 2022 – 2024
