BASE

João Pessoa, Brazil · UTC-3

SKILLS

BACKEND

Python, FastAPI, SQLAlchemy, Alembic, NestJS, Prisma, PostgreSQL, Redis/BullMQ, S3, REST, WhatsApp API

FRONTEND

TypeScript, React, Next.js (App Router), Tailwind CSS, TanStack Query, React Hook Form + Zod, Radix UI, Vite

DESIGN ENGINEERING

Design systems, design tokens, light/dark theming, responsive layout, data visualization, accessibility (ARIA, keyboard, screen readers)

TESTING & QUALITY

Vitest, Testing Library, Playwright, pytest, architecture decision records, pinned runtimes, generated API contracts

3D & REAL-TIME

Unreal Engine, Blender, Maya, procedural animation, drone-show choreography

LANGUAGES

Portuguese	Native
English	Fluent
Spanish	Beginner

PORTFOLIO →

GABRIEL DANTAS

Full-Stack Developer · TypeScript, React, Python & Design Systems

FROM DRONE SHOW ENGINEERING TO FULL-STACK DEVELOPMENT

ABOUT

Full-stack developer who ships production systems end to end — Python and TypeScript backends, React frontends, design systems, and the tests that keep them honest. Sole engineer on two production systems for construction companies; owner of the entire web frontend of a healthcare product with paying customers. Before software: live drone shows, synchronizing up to 1,600 aircraft for audiences of 100,000.

EXPERIENCE

- Copesolo & Concesolo** — Software Developer, Technology & Innovation Lead Jan 2026 – Present
Largest foundation and geotechnical engineering firm in Northeast Brazil (~100 employees).
 - Sole engineer of the company-wide system covering production tracking, warehouse inventory, machinery control and HR (employee and equipment documentation) — FastAPI + async SQLAlchemy + Alembic on Supabase Postgres; React + TypeScript + Tailwind.
 - Built a WhatsApp automation that inverted daily reporting: job sites now report to the site engineer and the system on their own, instead of her contacting every site each day. Production data became constant and reliable.
 - Built a two-regime payroll-bonus engine (hourly and per-meter) with row-level locking at payroll close, so concurrent requests cannot pay the same work twice.
 - Wrote the project's architecture decision records, pinned every runtime (Node, Python, Postgres), and generated API contracts from the backend so client and server cannot drift apart.
 - 66 backend tests (pytest), 46 frontend unit tests, 13 Playwright end-to-end suites; ARIA, keyboard navigation and screen-reader affordances throughout.
- FaturaMed** — Frontend & Design System Engineer Apr – Aug 2026 · Freelance
Medical revenue-recovery platform for doctors billing health insurers in Brazil — in production, paying customers; AI reads claim forms from photos.
 - Owned the entire web frontend: built the design system from brand identity to shipped UI — design tokens, typography, light and dark themes, and the shared component layer every screen uses.
 - Built the data-visualization layer (donut, funnel) on @nivo, legible down to phone widths; added TanStack Query caching and a persistent shell, replacing per-screen refetches with skeleton-driven loading states.
 - Established the project's frontend testing environment (Vitest + Testing Library), including a test asserting password reset never reveals whether an account exists.
- GBS Construtora** — Full-Stack Developer Feb – Nov 2025 · Freelance
 - Led the company's digital transformation as its sole engineer: designed and built a proprietary, closed-source production-control system end to end — FastAPI + async SQLAlchemy on PostgreSQL; React + TypeScript + Tailwind frontend.
- Alok · Pixel Drone** — Drone Show Engineer 2024 – 2026
 - Directed and engineered live drone shows: 3D animation choreographed and synchronized across fleets of up to 1,600 aircraft, for live audiences of 100,000; choreography from 3D animation through flight-ready output.
- Damoda** — 3D Technical Artist Shenzhen, China · 2024
 - Three-month engagement with a Chinese drone-show manufacturer, working across the animation-to-hardware pipeline.

OPEN SOURCE

- Refund** — full-stack refund-management system, solo, deployed Jul – Aug 2026
github.com/gabrieldborges/Refund-api · github.com/gabrieldborges/Refund
 - FastAPI + Clean Architecture governed by 11 architecture decision records; typed settings, Problem Details errors, structured logging, contract tests, mocked and integration suites (PostgreSQL + MinIO), Docker, CI. React 19 frontend with component tests. Live on Railway.

EDUCATION

- FIAP** — B.Sc. Software Engineering 2024 – 2028 (expected)
- Animation Mentor** — Character Animation specialization, USA 2024
- Faculdade Méliès** — 3D Animation & Design 2022 – 2024
